

Turning AI skills

into verified proof for international graduates.

Team Name:
Three and a half

The problem

Australian context

97%

of Australian hiring managers expect new hires to have some AI proficiency
[3]

88%

struggle to find talent with the right capabilities.
[3]

International students' situation

lack local experience, references and networks to demonstrate job-ready skills to Australian employers.
[2]

> 50%

of international graduates in Australia are employed below their skill level.
[2]

Primary Users

Capable, but no way to prove it.

Target Segment: **International students in CS, IT, data and analytics**

Meet Liz

- 21 year-old
- Final-year Data Science international student.
- Strong grades, uses AI daily.
- Guide other students to use AI at uni.

*based on a real student, used with permission

Pain points

- "Recruiters want Australian experience I don't have"
- "I use AI well, know to check AI outputs , but nothing on my resume shows it."
- "My overseas experiences don't mean anything to local employers."

She needs proof employers trust.

Technical Execution

Scores computed with Rubric

The model runs our rubric maths, so the same submission always grades the same way.

The judge reports its confidence

Every score carries a confidence figure, so uncertainty is visible and can be flagged instead of hidden.

A human signs before release

No high-stakes decision is ever fully automated, the brief rules that out, and so do we.

Stack used

Next JS

OpenAI

Postgres

Langfuse

Supabase

Duck Duck Go

Tailwind

3 Tier Requirements Bank

A 3-tier cache hierarchy: maximizes speed and trust at the top, ensures infinite role coverage at the bottom.

What it is: Real-time challenge synthesis for novel companies, niche tech stacks, or unique roles.

What it is: Previously generated challenges stored in our repository database.

Planned: map all three tiers to relevant **SFIA 8** skills and responsibility levels.

What it is: Pre-validated challenges with an official MentorME Verified badge

Limitations

Mentor capacity and fit

**AI cannot 100% reliably grade arbitrary code
or open-ended work → need human review**

Assessment framework validation

**Project quality is inconsistent across
different JDs**

Faster hires, verified talent, fairer access

Who gets value

- **Students:** proof of AI skills employers trust, improve AI skills.
- **Employers:** verify AI capability before interview, less hiring risk.
- **Universities:** a measurable employability tool for graduate outcomes.

3 success indicators – pilot target

- **Employer engagement:** how often employers open the evidence page.
- **Outcome proxy:** interview invitations, or time to a first verified work sample.
- **Trust and quality:** AI-to-mentor score agreement, and mentor turnaround time.

Path to credibility

Iterate the product

Built to be challenged

FAIRNESS

Barriers never reach the rubric

Seven classes of filter – residency, pedigree, credentials, culture fit, native speaker, years served, local experience — are stripped from the job description before a rubric exists.

SECURITY

The transcript is treated as untrusted input

Text that tries to instruct the evaluator is detected and routed to a human. Candidate code runs in their own browser, never on our servers.

PRIVACY

The evaluator is told nothing about the person

No name, nationality, education or employer reaches it. It sees the rubric, the transcript and the files, and nothing else.

HUMAN OVERSIGHT

Escalation is a rule, not a judgment

Low confidence, missing evidence, a borderline score or an integrity flag each route to a mentor — and the mentor's verdict outranks the model.
